

Artemide at Euroluce 2023

Artemide confirms its participation at **Euroluce 2023** with products borne out of constant research and technological innovation.

Artemide has always listened to the world, through research and through dialogue with people who design the spaces of present and future living.

The new collections that blend innovation and ancient knowledge, are flexible and transversal proposals capable of bringing good light to private and public spaces, personal or shared, indoors and outdoors.

Especially at Euroluce will be protagonists professional systems that further complete the range of Artemide proposals with flexibility, transversality, integration and freedom of application in space and time. They are infrastructures that bring light into any space with carefully measured parameters for perfect perception and great attention to energy consumption, which is increasingly reduced thanks to optoelectronic solutions that guarantee very high efficiencies.

In addition, Artemide will present updates on its patented **INTEGRALIS®** technology, the innovative light that sanitizes spaces fitting perfectly into the products of Artemide's collections.

The stand, where it will be possible to live a lighting experience that is an expression of Artemide's know-how, skills and values, is a project by **Mario Cucinella**.

Artemide is also the protagonist of **Salone del Mobile 2023** in different exhibition spaces within the city and is pleased to invite you to discover the 2023 novelty.
