Artemide had the privilege of contributing to the redevelopment of the **JUNG Founder's Villa**, an icon of modern architecture transformed into a multifunctional center. The lighting design was conceived to enhance the historical character of the building, originally constructed in 1928, while adding value to the newly designed spaces with solutions that blend design, technology, and sustainability. Carefully selected Artemide fixtures make light a key element in ensuring comfort and functionality, aligning with the project's minimalist and sustainable approach. This synergy between innovation and responsibility contributed to the project receiving the **German Design Award 2025**, reaffirming the excellence of a vision where light and architecture exist in perfect harmony.
