Artemide supports the transformation of the new **Fornaroli Polymers** headquarters with a lighting project that integrates quality of light and energy efficiency, contributing to the definition of a contemporary workplace focused on collaboration and people's well-being.

Inside, **A.24** and **Alphabet of Light** systems interact with the architecture, defining spaces through essential and flexible lighting solutions that adapt to different ways of working. **Hoy System** helps create a sober and controlled atmosphere, providing light suited to everyday activities within the workspaces.

A.24 - Carlotta de Bevilacqua

Alphabet of Light - BIG Bjarke Ingels Group

Hoy System - Foster + Partners Industrial Design

Outdoors, **Walking Pole** and **Cuneo** enhance the building envelope and exterior areas, integrating with the architectural language and reinforcing the dynamic image of the building.

A project in which light accompanies architecture and spatial organization, helping to shape balanced, efficient and recognizable work environments, in line with the identity of Fornaroli Polymers and Artemide's design approach.

Walking Pole - Carlotta de Bevilacqua

Cuneo - Klaus Begasse
