Foster + Partners Industrial Design

Foster + Partners is an international studio for architecture, engineering and design, led by Founder and Chairman Norman Foster and a Partnership Board. Founded in 1967, the practice is characterised by its integrated approach to design, bringing together the depth of resources required to take on some of the most complex projects in the world. They have always had a strong interest in the making of things as an integral part of the design process, rooted in what they believe is a duty to design well and responsibly, whether that is at the scale of an airport or a door handle.

The practice has never drawn a distinction between architecture and industrial design. The point of contact, the thing that you touch, is as important as the broader vision. The industrial design team established in 1980, has developed a wide range of products from door handles to wind turbines; from a fountain pen to the cabin of an executive jet; from a tap to the fit-out of an ocean yacht. Frequently, products are designed in response to a particular project, but they also work directly with clients on product commissions or with companies to develop new products for commercial manufacture.

Ixa

Foster + Partners Industrial Design 2022

Ixa is a complete and transversal family composed through the combination of an adjustable spherical head, rods and counterweights. It is a smart and scalable principle that allows the Ixa family to expand with the addition of new versions.

Ixa is the expression of functional, productive and sustainable intelligence through deliberate choices of reduction and simplification, the result of a solid design know-how. Artemide and Foster + Partners Industrial Design share a profound approach to sustainable design that permeates product development at every stage and singles itself out as an essential element of the project.

Ixa brings light to where it is needed, inviting us to physically interact with the object that makes us authors of our light space.

Inspired by Alexander Calder's dynamic sculptures, the design interprets the idea of "elegant balance" through precision engineering.

Flexibility and functionality, quality and dynamism of light, simple, soft lines, with a classic, simple look turn Ixa into a timeless project, which can be reinterpreted in countless situations for a long life, the basis of a sustainable project.

Photo by Pierpaolo Ferrari

«Ixa has evolved through an intuitive design and making process. Slight variations in applied weight and movement have informed the lamp's dynamic design.

Ixa provides a flexible, highly personalised lighting experience.»

Mike Holland, Foster+Partners Industrial Design

Ixa magnetic head movement

Ixa head separates the electrical cable from the mechanism and is connected to the structure itself by a magnet that allows it to freely rotate a 360°, allowing its handy light to be projected in any direction.

On/Off Dimming

The device features intuitive operation: a quick press turns the light on or off. Pressing and holding the control activates the dimming function, allowing continuous adjustment of light intensity.

The solution with plug adds a functional detail: a small circular surface that helps define the path of the cable along the wall. A practical and visually appealing detail that defines Ixa Wall Spot in its interaction with the surrounding space.

Ixa Head
Ø 100 mm

A hand with red-painted nails holds a large, glowing yellow pendant light fixture. The light fixture has a long, thin stem and a large, rounded, bowl-shaped head. The interior of the head is illuminated, creating a bright white glow. The background is a solid, dark green color.

Ixa XL Head
Ø 150 mm

Ixa XL

In Ixa XL a larger head is combined with two new structures, wall and ceiling, recalibrated to balance the weight and bring light into the space to respond to different lighting needs.

The larger size of the head hosts a lens that precisely controls the emitted beam and incorporates a dim to warm source, warming the colour temperature of the light as the intensity decreases.

Ixa XL head movement

The head does not have a magnetic connection like Ixa, but it slides and turns thanks to a calibrated mechanism.

The product described is based on a mechanism that integrates two complementary movements. The first consists of a 180° rotation of the head on itself, allowing for extensive orientation flexibility. The second movement, at 90° , follows a designated line, ensuring precise positioning. This combination of movements enables high versatility, offering a wide range of configurations adaptable to various operational needs.

Ixa XL dim to warm

Dim to warm is a lighting control technology that seamlessly aligns light intensity with color temperature, creating a natural and intuitive transition from functional brightness to intimate warmth.

At full output, the light delivers a clear and balanced 3000K. As it is dimmed, the tone gradually shifts to warmer hues, reaching a soft 1800K at low levels, evoking a calm and atmospheric glow. A single, fluid gesture shapes both the intensity and character of light, enhancing visual comfort and enriching the spatial experience with a sense of depth and sophistication.
