Hoy Spot & Hoy System - Foster + Partners Industrial Design

In the spaces of the **Norman Foster Foundation** in Madrid, light plays a key role in enhancing architecture and facilities dedicated to research, education, and innovation. The foundation promotes interdisciplinary thinking through archives, exhibitions, and masterclasses, supporting new generations of architects, designers, and urban planners in anticipating future challenges.

Hoy System - Foster + Partners Industrial Design

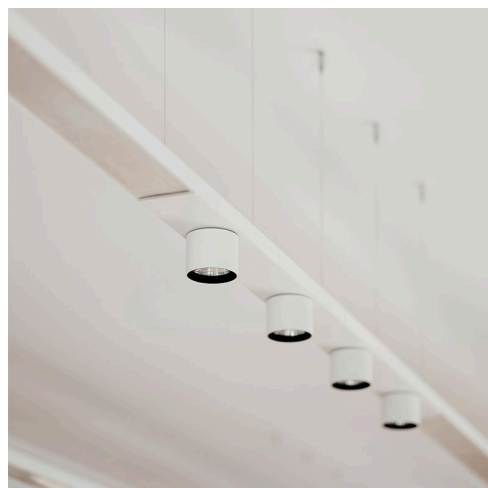

Within this context of excellence, a lighting project was developed to highlight the headquarters, creating functional and welcoming environments. The **Hoy** family, the result of a collaboration between **Artemide** and **Foster + Partners Industrial Design**, harmonizes light and architecture, emphasizing both exhibition areas and zones dedicated to education and research. A project that combines design and functionality, demonstrating how thoughtful **use of light** can support creativity, research, and innovation, while enhancing the everyday experience within the foundation.
